

Access By Design

Web Sites
for Audiences of
All Abilities

Jim Ramsay and
Deborah DeBord

Accessible Web Sites are for everyone

- Everyone benefits from a well-crafted web site
- A well-crafted site is based on sound design principles
- By following the principles of good design, we can make our web sites accessible right from the start.

Principles of (Web Site) Design

- Simplicity
- Economy
- Readability
- Coherence
- Legibility
- Clear Organization
- Easy Navigation

Design Principles & Web Design

- Simplicity → Uncluttered
- Economy → Loads quickly
- Readability → Gets to the point
- Coherence → Everything helps the audience get the point
- Legibility → Anyone can read it
- Organization → Predictable arrangement
- Navigation → Easy to find what you're looking for

Adaptive and Other Technologies

- Screen enlargement programs
- Color manipulation programs
- Alternative navigation devices
- Text-to-speech screen readers
- Braille readers
- Palmtop computers
- Text-only browsers

Web Design Features that May Affect Accessibility

- Font and background color combinations
- Images used as headings
- Non-standard use of HTML tags
- Framesets and tables
- Image maps
- JavaScript and ActiveX
- Animations and dynamic HTML
- Cascading Style Sheets

Conclusion

- By following sound principles of design, we can develop web sites that
 - Reach diverse audiences of all abilities
 - Users of different platforms and browsers, users of adaptive technologies, and users of portable computing devices.
 - Meet the needs and expectations of the whole audience
 - The same high-quality experience for everyone
 - Taste great *and* are less filling
 - Well designed sites are simple yet elegant
